

Our core business is sourcing, supplying and trading crude oil and refined petroleum products. From these origins we have expanded the portfolio to encompass petrochemicals.

We enhance our trading activities with strategic assets providing valuable insights into market places where we operate and enabling us to optimize the supply chain; for example, by business management regarding oil production services, fuels and electrical energy, and transport storage and delivery of goods.

Over the years our activities have enabled us to develop remarkable insights into the commodity sectors that are becoming increasingly interrelated. Equally, our strong physical presence throughout the value chain helps provide knowledge and identify the path for our continued growth.

Partnerships with participants in the energy markets, global and local have played a key role in our business to date and will undoubtedly continue to do so as we move forward.

The MPCI business development team is led by seasoned experts predominately from the energy, trading and finance sectors. They have extensive experience in the energy sector both in developed and emerging markets. Their skill is in recognizing and evaluating partnership based opportunities that are fundamental to the realization of our vision.

The ever-growing correlation between energy products, commodities and financial services represents opportunity for us. Our origination team coordinates all the physical and financial elements that enable the realization of large scale transactions anywhere along the supply chain. Working with our trading desks, the team operates across all commodities and all the potential markets and helps partners to meet their business objectives by providing access to adequate financial resources.

Mid east Pure Chemical Industry LTD

Crude Oil :

IRAQ , NIGERIA & IRAQ KURDISTAN ,BLCO , RLCO ,FLCO
